

Simple To Do...

Step 1: Go to [Godaddy.com](https://www.godaddy.com) and search for a domain name.

Remember the Terms...

Vendors may purchase a Domain name and have it forwarded to their Offer page, however, the domain name must not include any wording that would give the false impression that this is a corporate domain name and may not include the trade name of RealTimePainRelief or RTPR.

Step 2: Purchase It (cost is about \$9 - \$10 per year and no need for any options they offer you).

Simple To Do...

Step 3: Click “Domains” dropdown menu and select “ALL Domains”

Step 4: Click the Domain Name you would like to Forward

A screenshot of a web interface with a green header. The header contains three dropdown menus: 'Domains', 'Buy & Sell', and 'DNS'. The 'Domains' dropdown menu is open, showing a list of options: 'All Domains', 'Transfers', 'Pending Account Changes', 'Expired Domains', and 'Pre-Registration Domains'. Below the dropdown menu, a table is partially visible with columns for 'Monetize', 'Status', and 'Action'. The 'Monetize' column has a green dollar sign icon and a dropdown arrow. The 'Status' column has a dropdown arrow. The 'Action' column has a dropdown arrow. The table rows show '2017' and 'Act'.

Simple To Do...

Step 5: Click “Manage” in the Forwarding Section

Settings	DNS Zone File	Contacts
Auto-Renew ⓘ	Standard: On Extended: Off Manage	
Lock ⓘ	On Manage	
Nameservers ⓘ	NS57.DOMAINCONTROL.COM NS58.DOMAINCONTROL.COM Updated 9/10/2013 Manage	
Forwarding ⓘ	Domain: Off Manage Subdomain: 0 subdomains forwarded Manage	
DS Records ⓘ	0 DS records created Manage	
Host Names ⓘ	0 hostnames created Manage	
Domain Transfer ⓘ	Transfer Out	
Authorization Code ⓘ	Email my code	

Simple To Do...

Step 5: Input the settings outlined here...

The address to forward to will be:

RTPR.com/offer/YourID

Note: YourID can be found in the top right of your Backoffice Control Panel

Add Forwarding

* Required **Select https://**

Forward to: * [Preview](#)

https:// **RTPR.com/offer/YourID**

Redirect type: * [i](#)

301 (Permanent) 302 (Temporary)

Forward settings: * [i](#)

Forward only **Select Forward Only**

Update my nameservers and DNS settings to support this change. (Recommended)

Add [Cancel](#) **Click ADD**
